

DARTHOM INTLLIGENCE

Real Resume & Backstory Packet

ENGINEER. ANALYZE. EXECUTE.

Private engineering, AI systems, data intelligence, infrastructure, product strategy, and opportunity execution.

Profile Packet Overview

This packet turns the original Darthom Intelligence roster into resume-style professional profiles with matched portraits, backstories, selected work, career timelines, and operator value statements.

The roster is written as a serious private/freelance engineering collective: people who have created their own opportunities, built technical systems privately, and now operate under one company standard.

The profiles avoid pretending to be externally verified employment records. They are built as polished internal/company profile drafts that can be edited further before publication.

Image Assignment Map

Person	Role	Assigned Image(s)	Why this match works
Skyles Over London / Gray Skyes	President	Gray Skyes.png, Gray skyes2.png	Two images used because the president profile needs both an executive portrait and command-office presence.
Darius Hartwell	Chief Intelligence Architect	male6.png	Assigned male6.png because the portrait reads as senior, strategic, and intelligence-focused.
Talia Monroe	Lead AI Systems Engineer	female1.png	Assigned female1.png because the strong green suit and direct presence fit the lead systems engineer profile.
Roman Ellis	Senior Full-Stack Engineer	male4.png	Assigned male4.png because the portrait reads modern, technical, and product-build oriented.
Nyla Voss	Data Operations Strategist	female3.png	Assigned female3.png because the controlled, formal look fits a data operations strategist.
Kendrick Vale	Security & Infrastructure Engineer	male3.png	Assigned male3.png because the structured, dark green executive look fits security and infrastructure ownership.
Amara Stone	Product Intelligence Engineer	female4.png	Assigned female4.png because the polished executive stance fits product strategy and client-facing leadership.
Jalen Cross	Opportunity & Systems Closer	male2.png	Assigned male2.png because the formal, composed portrait fits partnership and deal-closing authority.

Note: The supplied folder contained two extra individual portraits beyond the current eight-person roster. They are retained in Assets/Unused_Alternates for future additions or swaps.

Company Capability Stack

- **Executive command:** Skyles Over London / Gray Skyes - Standards, partnerships, proof-first delivery, operating discipline
- **Intelligence architecture:** Darius Hartwell - Opportunity maps, lead scoring, market signals, decision dashboards
- **AI systems:** Talia Monroe - AI workflows, agents, document automation, human-in-the-loop tooling
- **Product surfaces:** Roman Ellis - Client portals, dashboards, internal tools, monetizable MVPs
- **Data operations:** Nyla Voss - Data cleaning, KPI systems, reporting quality, source documentation
- **Security & infrastructure:** Kendrick Vale - Cloud posture, access control, backups, deployments, technical risk
- **Product intelligence:** Amara Stone - Offer design, MVP scoping, product narratives, monetization paths
- **Opportunity closing:** Jalen Cross - Discovery, proposals, partnerships, deal flow, revenue movement

Skyles Over London / Gray Skyles

President

Department: Executive Leadership

Location: Phoenix command lane with multi-state operating scope

Contact: Executive contact routed through Skyles Over London / SOLEnterprises public channels

PROFESSIONAL SUMMARY

Executive operator and systems builder leading Darthom Intelligence with proof-first standards, AI infrastructure discipline, contract-aware delivery, and real-world operating pressure. Gray functions as the command layer between engineering talent, client trust, opportunity validation, and revenue-producing deployment.

CORE COMPETENCIES

Executive operating systems	AI infrastructure and control planes
Contract and partnership strategy	Multi-state operations
Governance-first delivery	Proof artifacts and evidence packs
Procurement-grade trust surfaces	Technical product direction

RESUME TIMELINE

Role	Period	Scope
President, Darthom Intelligence	2026 - Present	Sets strategy, approves major opportunities, aligns AI/data engineering with monetizable delivery, and enforces proof-first standards across the team.
Founder / Operating Company Lead, Skyles Over London	2023 - Present	Built a public-facing ecosystem around AI infrastructure, portals, governance, proof artifacts, and operator-grade web systems.
Private Operator / Network Architect	2018 - 2023	Built contractor networks, time-critical routing systems, credibility surfaces, and operational playbooks across regulated service lanes.

SELECTED WORK / PROOF PROJECTS

- Governed AI platform family with gateway, IDE, and patch-driven delivery lanes
- Authority-grade public trust surfaces for B2B and procurement conversations
- Multi-state operating discipline for Arizona, Texas, Colorado, and Illinois activity
- Proof-first delivery framework involving logs, smoke tests, exports, and verification statements

BACKSTORY

Gray comes from the operator side of technology, where tools only matter if they move contracts, protect accountability, and survive real deployment. The president seat exists because Darthom Intelligence needs more than builders. It needs a person who can turn private engineering strength into an organized company with standards, receipts, and deal movement. Gray brings the pressure-tested mindset of logistics, contractor networks, governed systems, and executive communication into an AI/data intelligence company that must look serious and perform serious.

FIT INSIDE DARTHOM INTLLIGENCE

Gray keeps the team from drifting into theory. The president role makes sure every build has a buyer, every claim has proof, every system has ownership, and every opportunity has a lane to close.

EDUCATION / CONTINUING DEVELOPMENT

Self-directed executive engineering, AI infrastructure, operations architecture, contract systems, and platform governance development.

Darius Hartwell

Chief Intelligence Architect

Department: Intelligence Architecture
Location: Remote-first / Phoenix-aligned operations
Contact: darius.hartwell@darthom-intelligence.example

PROFESSIONAL SUMMARY

Private data intelligence operator who turns scattered business information into opportunity maps, lead-scoring models, client-value signals, and decision-ready dashboards. Darius owns the intelligence layer that tells Darthom Intelligence where the money is hiding and what should be built next.

CORE COMPETENCIES

Data intelligence architecture	Opportunity mapping
Market signal research	Lead scoring
Competitive tracking	Dashboard strategy
Data product design	Revenue-focused analytics

RESUME TIMELINE

Role	Period	Scope
Chief Intelligence Architect, Darthom Intelligence	2026 - Present	Leads the company intelligence model, converts public and client-provided data into revenue-focused opportunity maps, and supports engineering and sales decisions.
Independent Data Intelligence Consultant	2021 - 2026	Built lead intelligence systems, KPI dashboards, market maps, and lightweight data products for owner-operators, consultants, and technical founders.
Freelance Research Systems Builder	2018 - 2021	Created private research folders, prospect databases, competitor trackers, and reporting templates for solo businesses and small teams.

SELECTED WORK / PROOF PROJECTS

- Opportunity Heatmap: lead-priority scoring model for local B2B services
- Client Value Ledger: dashboard for ranking accounts by margin, renewal risk, and next-best offer
- Competitor Movement Tracker: private watchlist combining public updates, pricing signals, and service changes
- Intelligence Brief Engine: repeatable research template that turns raw notes into executive-ready recommendations

BACKSTORY

Darius learned early that most companies are sitting on useful data but lack the discipline to turn it into action. He built his private practice around messy spreadsheets, broken CRMs, scattered notes, and owners who needed clarity fast. Over time, he became the person people called when they did not need another report, but needed to know where the opportunity was. At Darthom Intelligence, that private operator instinct becomes the company intelligence spine.

FIT INSIDE DARTHOM INTLLIGENCE

Darius gives Darthom Intelligence foresight. He identifies what markets to enter, which clients to pursue, which workflows to automate, and which data products can be packaged for revenue.

EDUCATION / CONTINUING DEVELOPMENT

Coursework and continuing study in data analytics, business intelligence, Python automation, SQL, OSINT methodology, and ethical data handling.

Talia Monroe

Lead AI Systems Engineer

Department: AI Engineering
Location: Hybrid / secure remote build lane
Contact: talia.monroe@darthom-intlligence.example

PROFESSIONAL SUMMARY

AI automation engineer specializing in practical workflows, internal assistants, research agents, and document-to-action systems. Talia makes Darthom Intlligence faster by turning repeatable thinking into AI-supported execution without losing control of quality or accountability.

CORE COMPETENCIES

AI workflow design	Prompt system architecture
Agent orchestration	Document automation
CRM automation	Model routing concepts
Human-in-the-loop review	Rapid prototyping

RESUME TIMELINE

Role	Period	Scope
Lead AI Systems Engineer, Darthom Intlligence	2026 - Present	Designs internal AI workflows, builds research/reporting automations, and turns service delivery into repeatable machine-assisted lanes.
Independent AI Automation Builder	2022 - 2026	Built proposal generators, client intake routers, summarization flows, and AI research assistants for founders, agencies, and service businesses.
Automation Specialist / No-Code to Code Consultant	2019 - 2022	Connected forms, CRM systems, spreadsheets, emails, and reporting tools into workflows that reduced manual administration.

SELECTED WORK / PROOF PROJECTS

- AI Intake Router: classifies new client submissions, assigns urgency, and drafts next-step notes
- Proposal Drafting Engine: transforms discovery notes into service-specific proposal outlines
- Ops Summary Assistant: converts meeting transcripts and activity logs into action lists
- Research Agent Library: reusable prompts and checklists for market scans, competitor reads, and diligence briefs

BACKSTORY

Talia started by automating the annoying parts of small businesses: intake forms, follow-up emails, client notes, and repetitive proposals. When AI tools became useful, she moved beyond prompt experiments and focused on systems that fit real operations. Her private clients did not care about demos. They cared about fewer mistakes, faster responses, and cleaner delivery. That pressure shaped her into an engineer who treats AI as a controlled work layer, not a magic trick.

FIT INSIDE DARTHOM INTLLIGENCE

Talia converts Darthom Intlligence intelligence into motion. She builds the workflows that let a lean team produce the output of a larger operation while keeping humans in control.

EDUCATION / CONTINUING DEVELOPMENT

Continuing technical development in LLM operations, automation architecture, structured prompting, Python scripting, API integrations, and workflow QA.

Roman Ellis

Senior Full-Stack Engineer

Department: Software Engineering
Location: Remote-first product build lane
Contact: roman.ellis@darthom-intlligence.example

PROFESSIONAL SUMMARY

Full-stack software engineer who builds the visible systems: portals, dashboards, internal platforms, MVPs, and client-facing product surfaces. Roman turns conversations into working interfaces that clients can log into, test, buy, and use.

CORE COMPETENCIES

Full-stack development	React/Next-style app architecture
API integration	Dashboard UX
MVP execution	Admin portals
Payment-connected workflows	Deployment readiness

RESUME TIMELINE

Role	Period	Scope
Senior Full-Stack Engineer, Dartthom Intlligence	2026 - Present	Builds client-facing dashboards, internal portals, demo surfaces, MVP platforms, and integrations for AI/data intelligence products.
Freelance Software Engineer	2020 - 2026	Delivered websites, business apps, intake systems, admin dashboards, and MVPs for technical founders and service businesses.
Junior Web Developer / Contractor	2017 - 2020	Built landing pages, forms, small databases, and automation-assisted front ends while learning client delivery discipline.

SELECTED WORK / PROOF PROJECTS

- Darthom Client Portal: role-based dashboard for service updates, deliverables, and proof artifacts
- Revenue Ops Dashboard: web interface for viewing lead stages, deal value, and follow-up status
- MVP Launch Kit: reusable front-end structure for landing, intake, account, and admin pages
- AI Output Review Console: workspace for reviewing generated briefs before client delivery

BACKSTORY

Roman built his reputation in the freelance world where good ideas die unless someone can ship the interface. He learned to work fast, ask direct questions, and build what proves the value first. His clients were often people who had been burned by slow development cycles and needed something practical. At Dartthom Intlligence, Roman is the builder who turns private intelligence and automation into product surfaces that feel real immediately.

FIT INSIDE DARTTHOM INTLLIGENCE

Roman makes the company visible. When Dartthom needs a portal, proof dashboard, command surface, or monetizable MVP, Roman creates the technical front door.

EDUCATION / CONTINUING DEVELOPMENT

Technical training in JavaScript, TypeScript, front-end architecture, API development, relational data modeling, cloud deployment, and product UX.

Nyla Voss

Data Operations Strategist

Department: Data Operations
Location: Remote data operations lane
Contact: nyla.voss@darthom-intelligence.example

PROFESSIONAL SUMMARY

Data operations specialist who brings order to messy inputs, standardizes reporting, cleans source data, and builds reliable KPI systems. Nyla makes sure Darthom Intlelligence does not confuse information collection with intelligence control.

CORE COMPETENCIES

Data cleaning	KPI systems
Operational reporting	Pipeline documentation
CSV and spreadsheet automation	Data QA
Customer segmentation	Process mapping

RESUME TIMELINE

Role	Period	Scope
Data Operations Strategist, Darthom Intlelligence	2026 - Present	Owns reporting workflows, data quality, source mapping, and operational intelligence packages for internal and client-facing use.
Private Analytics Contractor	2020 - 2026	Cleaned business data, built dashboards, standardized KPI trackers, and created reporting templates for small companies and consultants.
Operations Analyst / Freelance Support	2017 - 2020	Supported scheduling, customer records, spreadsheet systems, and performance reports for service-oriented teams.

SELECTED WORK / PROOF PROJECTS

- Data Hygiene Protocol: checklist-driven process for cleaning imports before analysis
- KPI Command Sheet: repeatable dashboard framework for owners tracking lead flow, fulfillment, and revenue
- Customer Segmentation Pack: grouping model for identifying high-value accounts and renewal risk
- Reporting QA Grid: validation system to prevent bad data from becoming executive guidance

BACKSTORY

Nyla built her career around a problem most teams ignore until it costs money: dirty data. Her private clients had duplicate records, inconsistent labels, missing fields, and dashboards nobody trusted. She became the operator who could turn that mess into a system. Her backstory is less flashy and more valuable: she protects the truth of the numbers. At Darthom Intlelligence, that makes her one of the people who keeps intelligence credible.

FIT INSIDE DARTHOM INTLLIGENCE

Nyla gives the team discipline. She makes the data usable, the reports repeatable, and the decisions grounded instead of guessed.

EDUCATION / CONTINUING DEVELOPMENT

Continuing development in analytics operations, spreadsheet automation, SQL, dashboard design, data documentation, and quality-control workflows.

Kendrick Vale

Security & Infrastructure Engineer

Department: Infrastructure / Security
Location: Secure remote infrastructure lane
Contact: kendrick.vale@darthom-intlligence.example

PROFESSIONAL SUMMARY

Infrastructure and security engineer focused on stable cloud systems, access control, backups, deployment hygiene, and practical security hardening. Kendrick keeps Darthom Intlligence systems private, reliable, and ready for serious client work.

CORE COMPETENCIES

Cloud infrastructure	Access control
Backup strategy	DNS and domain systems
Deployment pipelines	API key handling
Security hardening	Reliability monitoring

RESUME TIMELINE

Role	Period	Scope
Security & Infrastructure Engineer, Darthom Intlligence	2026 - Present	Controls infrastructure posture, account access, deployment readiness, backups, and technical risk for internal and client-facing systems.
Independent Infrastructure Engineer	2020 - 2026	Set up cloud hosting, secure admin portals, permission models, environment variables, backup plans, and deployment checklists for lean teams.
IT Systems Contractor	2016 - 2020	Supported user accounts, devices, cloud apps, small-business security basics, and operational technology cleanup.

SELECTED WORK / PROOF PROJECTS

- Access Control Map: role-by-role permission design for internal portals and client dashboards
- Deployment Readiness Checklist: environment, domain, SSL, key, backup, and rollback review process
- Secure Key Handling Standard: workflow for protecting API keys, credentials, and service tokens
- Recovery Lane: backup and restoration process for critical business documents and app data

BACKSTORY

Kendrick came up solving the kind of problems that only get attention when something breaks. Password chaos, missing backups, exposed keys, fragile hosting, and no rollback plan made him realize that infrastructure is part of revenue. A company that cannot protect its systems cannot protect its money. His private work gave him a practical security mindset: enough structure to be serious, not so much complexity that the team stops moving.

FIT INSIDE DARTHOM INTLLIGENCE

Kendrick keeps the money-making systems alive. He makes sure Darthom Intlligence can build fast without becoming careless.

EDUCATION / CONTINUING DEVELOPMENT

Technical development in cloud administration, Linux basics, DNS, identity and access management, backup procedures, cybersecurity fundamentals, and secure deployment workflows.

Amara Stone

Product Intelligence Engineer

Department: Product Development
Location: Hybrid product strategy lane
Contact: amara.stone@darthom-intlligence.example

PROFESSIONAL SUMMARY

Product engineer who packages technical capability into offers, MVPs, service lanes, and monetizable systems. Amara translates what the team can build into something the market can understand, buy, and repeat.

CORE COMPETENCIES

Product strategy	MVP scoping
Offer architecture	Service packaging
User journeys	Monetization models
Launch planning	Client value translation

RESUME TIMELINE

Role	Period	Scope
Product Intelligence Engineer, Dartthom Intlligence	2026 - Present	Defines MVPs, packages services, turns internal capabilities into offers, and coordinates product narratives across engineering and sales.
Private Product Engineer	2021 - 2026	Built MVP scopes, digital service packages, launch systems, client onboarding experiences, and offer frameworks for independent businesses.
Product Operations Consultant	2018 - 2021	Helped owners turn service chaos into repeatable delivery systems, checklists, packages, and customer-facing workflows.

SELECTED WORK / PROOF PROJECTS

- Darthom Offer Map: productized service menu connecting intelligence, AI, portals, and reporting
- MVP Validation Sheet: lean scoring tool for deciding which opportunities deserve build time
- Client Journey System: intake-to-delivery workflow for technical service packages
- Monetization Ladder: structure for moving from custom work to repeatable products

BACKSTORY

Amara entered the private product lane after watching technically strong teams fail to explain what they sold. She learned that capability alone does not close deals. The offer needs a name, a pain point, a path, and a proof moment. Her work has always sat between engineering and the buyer. At Dartthom Intlligence, she makes sure the team does not just build impressive systems, but builds sellable systems.

FIT INSIDE DARTTHOM INTLLIGENCE

Amara gives Dartthom Intlligence its packaging discipline. She turns raw engineering power into product language, service structure, and revenue ladders.

EDUCATION / CONTINUING DEVELOPMENT

Continuing development in product management, UX research, go-to-market strategy, service design, pricing architecture, and technical requirements writing.

Jalen Cross

Opportunity & Systems Closer

Department: Growth / Partnerships
Location: Client-facing partnership lane
Contact: jalen.cross@darthom-intlligence.example

PROFESSIONAL SUMMARY

Technical growth operator who finds opportunities, shapes deals, builds partner trust, and translates engineering output into business outcomes. Jalen closes the loop between what Darthom Intlligence can build and who is ready to pay for it.

CORE COMPETENCIES

Technical sales	Opportunity creation
Client discovery	Proposal strategy
Partnership development	Deal structuring
Revenue pipeline systems	Executive communication

RESUME TIMELINE

Role	Period	Scope
Opportunity & Systems Closer, Darthom Intlligence	2026 - Present	Owns discovery, proposal shaping, partner outreach, revenue opportunity tracking, and close strategy for technical service lanes.
Independent Growth Operator	2020 - 2026	Helped freelance engineers, small agencies, and technical service providers find prospects, position offers, write proposals, and close client work.
Business Development Contractor	2017 - 2020	Supported outreach campaigns, CRM follow-up, lead qualification, referral relationships, and service packaging for early-stage operators.

SELECTED WORK / PROOF PROJECTS

- Deal Flow Board: CRM lane for opportunity status, offer fit, urgency, and next action
- Proposal Close Kit: structured proposal sections tied to value, timeline, proof, and payment milestones
- Partner Pipeline Map: relationship tracker for agencies, consultants, vendors, and referral sources
- Discovery Call Framework: question path that uncovers pain, cost of delay, and technical fit

BACKSTORY

Jalen built his skill in the gap between builders and buyers. He saw talented engineers undercharge because they could not explain the value, and business owners hesitate because technical people spoke in features instead of outcomes. His private work became about translation: turning capability into trust, trust into terms, and terms into closed work. At Darthom Intlligence, Jalen makes sure the private engineering power reaches the market.

FIT INSIDE DARTHOM INTLLIGENCE

Jalen makes the company commercially dangerous. He turns intelligence, products, and systems into conversations that move, proposals that land, and deals that close.

EDUCATION / CONTINUING DEVELOPMENT

Continuing development in consultative sales, technical discovery, CRM systems, proposal writing, revenue operations, partnership strategy, and negotiation.

Reference Notes for Skyes Over London / Gray Skyes

Public Skyes Over London materials describe operator-grade AI and web infrastructure built with proof-first discipline: gateways, brains, IDEs, portals, governance, metering, evidence, and deployable systems.

Public Skyes Over London materials also position the platform family around Gateway13, SkAIxu IDE, and Kaixu Push, with policy enforcement, audit trails, billing discipline, and operator UX.

The leadership profile describes Skyes Over London as an operating company across Arizona, Texas, Colorado, and Illinois, with contractor-network leadership, time-critical routing, compliance, and AI product leadership.
